HW2

- จงเขียนโปรแกรมและกำหนดค่าแล้ววาดภาพพื้นที่สี่เหลี่ยมคางหมู

sketch 690712b

```
1  def show_info():
2      print("This program draws a trapezoid.")
3
4  size(500,500)
5
6  def draw_trapezoid():
7
8      x = 150
9      y = 150
10
11     top = 100
12     bottom = 200
13     height = 150
14
15     line(x, y, x + top, y)
16     line(x, y, x - 50, y + height)
17     line(x + top, y, x + bottom - 50, y + height)
18     line(x - 50, y + height, x + bottom - 50, y + height)
19
20
21 show_info()
22 draw_trapezoid()
```

Result

HW2

- จงเขียนโปรแกรมและรับค่าสำหรับการหาค่าเฉลี่ยของเลข 3 จำนวน

```
def show_info():
    print("Calculate the average of 3 numbers.")

def get_number1():
    global num1
    num1 = float(input("Enter number 1: "))

def get_number2():
    global num2
    num2 = float(input("Enter number 2: "))

def get_number3():
    global num3
    num3 = float(input("Enter number 3: "))

def cal_average(num1, num2, num3):
    global average
    average = (num1 + num2 + num3) / 3

def show_average(average):
    print("Average =", average)

show_info()

get_number1()
get_number2()
get_number3()

cal_average(num1, num2, num3)

show_average(average)
```

Result

```
Calculate the average of 3 numbers.
Enter number 1: 5
Enter number 2: 6
Enter number 3: 7
Average = 6.0
```

HW2

- จงเขียนโปรแกรมและรับค่าสำหรับการหาค่า BMI

```
def show_info():
    print("BMI Calculator")

def get_weight():
    global weight
    weight = float(input("Enter weight (kg): "))

def get_height():
    global height
    height = float(input("Enter height (m): "))

def cal_bmi(weight, height):
    global bmi
    bmi = weight / ((height/100) ** 2)

def show_bmi(bmi):
    print("BMI =", bmi)

def show_result(bmi):

    if bmi >= 23:
        print("Obese")

    elif bmi >= 18.5:
        print("Normal weight")

    else:
        print("Under weight")

show_info()

get_weight()
get_height()

cal_bmi(weight, height)

show_bmi(bmi)

show_result(bmi)
```

Result

```
BMI Calculator
Enter weight (kg): 91
Enter height (m): 176
BMI = 29.377582646281
Obese
```

HW2

- def show_info():

```
def show_info():
    print("Calculate land area in square meters and square wah")

def get_width():
    global width
    width = int(input("Enter width (meters): "))

def get_length():
    global length
    length = int(input("Enter length (meters): "))

def cal_area(width, length):
    global area
    area = width * length

def show_area(area):
    print("Area =", area, "square meters")

def show_area_in_SqWa(area):
    print("Area =", area / 4, "square wah")

show_info()

get_width()
get_length()

cal_area(width, length)

show_area(area)
show_area_in_SqWa(area)
```

Result

```
Calculate land area in square meters and square wah
Enter width (meters): 300
Enter length (meters): 500
Area = 150000 square meters
Area = 37500.0 square wah
```
